

REDUCE PROJECT COSTS BY IMPROVING DATA INTEGRITY; IDENTIFY & FIX DATA INTEGRITY ISSUES

Have Reliable Data

The Beaconsuite™ Doctor module:

Protects your company from having unreliable data that may jeopardize decisions made by your Project, Operations and Maintenance staff.

Empowers application support personnel to quickly troubleshoot and fix data issues.

Provides the ability to accurately diagnose and repair bad data, reducing effort, saving time, money and, most importantly, delivers more reliable data.

BENEFITS

Quick identification of data issues that, if left undetected, could result in trends, change orders, possible safety incidents, and potential production losses

Proposes fixes thereby allowing issues to be addressed immediately

Promotes better quality data enabling reliable integration between different systems and databases
Reduces costs by reducing incorrect data being propagated between systems

Finds and fixes data that has corruption preventing it from being displayed in SPI

FEATURES

Identifies inconsistent use of templates, symbols, title blocks that impact deliverables. Enables the user to fix the inconsistencies immediately

Identifies loss of external data e.g. external archives (snapshots of deliverable revisions)

Identifies and fixes data that is located in the wrong Plant, Area, Units

Findings are easily exported to files

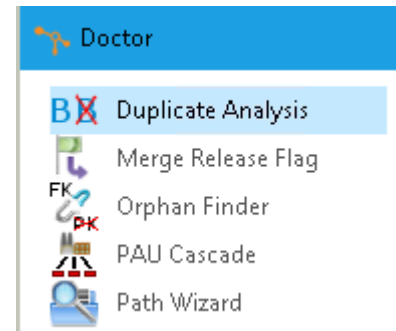

Identifies orphan records (broken links)

Identifies data that is corrupted and, as a result, is invisible to the front end of SPI

Identify and fix the hidden data issues
